Submitted (FEB-1997) to the EMBL/GenBank/DDBJ databases.

- CATALYTIC ACTIVITY: Release of an unsubstituted, C-terminal glutamyl residue, typically from Ac-Asp-Glu or pteroyl-gamma.

- COFACTOR: Zinc; Binds two ions per subunit (By similarity).

- SUBCELLULAR LOCATION: Type II membrane protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        This SWISS-PROT entry is copyright. SUBCELLULAR LOCATION: Type II membrane protein.
Parks the transmembrane domain and is probably:
                                                                                                                                                                                                                                                                                            TISSUE SPECIFICITY: Predominantly expressed in liver. While the alpha form is also expressed in spleen, lung, muscle, prostate and peripheral blood mononuclear cells, the beta form is expressed in all tissues tested, albeit weakly.

DISEASE: Defects in TFR2 are a cause of hereditary hemochromatosis type 3 (HFE3) [MIM:604250]. HFE3 is a disorder of iron hemostasis type 3 (HFE3) in iron overload and has a phenotype indistinguishable resulting in iron overload and has a phenotype indistinguishable from that of hereditary hemochromatosis (HH). HH is characterized by abnormal incestinal iron absorption and progressive increase of total body iron, which results in middlife in clinical total body iron, which results in middlife in clinical
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             FUNCTION: Mediates cellular uptake of transfer

Endosomal acidification leads to iron
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Roberts K.P., Griswold M.D.;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  nervous system (By similarity).
SUBUNIT: Homodimer; disulfide-linked. Binds one transferrin molecule per polypeptide chain (By similarity).
SUBCELLULAR LOCATION: Type II membrane protein (By similarity).
TISSUE SPECIFICITY: In testis, expressed in Sertoli cells,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        release. The apotransferrin-receptor complex is then recycled to the cell surface with a return to neutral pH and the concomitant loss of affinity of apotransferrin for its receptor. Transferrin receptor is necessary for development of erythrocytes and the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               peritubular myoid cells and Sertoli cells.

"Canine and feline parvoviruses can use human or feline transferrin

"receptors to bind, enter, and infect cells.";

"L. J. Virol. 75:3896-3902(2001).

"C. -!- FUNCTION: Cellular uptake of iron occurs via receptor mediated endocytosis of ligand-occupied transferrin receptor into specialized endosomes. Endosomal acidification leads to iron release. The apotransferrin-receptor complex is then recycled to the cell surface with a return to neutral pH and the concomitant conceptor is necessary for development of erythrocytes and the nervous system (By similarity).

"C. --- SUBUNIT: Homodimer; disulfide-linked. Binds one transferrin conceptor is necessary for development of entransferrin metals."

Endosomal acidification leads to iron release. The apotransferrin-receptor complex is then recycled to the cell surface with a return to neutral pH and the concomitant loss of affinity of apotransferrin for its receptor. Transferrin receptor is necessary for development of erythrocytes and the
